SUBJECT INDEX

Acceptability, and formulations of tarhana 579
lupin seeds in tempe 297
soy products after processing 147, 263
Acetone as zein film solvent, and hydrophobic molecule positions 599
Acid diffusion in cut root vegetables 473
Acidity reduction and metabiosis in fungus-innoculated tomatoes 379
Activation parameters of heat sterilization of ripe olives 31
Additives for pre-rigor beef from natural sources 65
Aerobic bacteria, on beef, in SCAP 725
Aeromonas hydrophila innoculated blue cod in controlled atmosphere 515
Agarose gel as model for acidification of root vegetables 473
Age group variations of endives leaves bacterial dynamics 221
Airblast and nitrogen freezing points and rates for tilapia 167
Amino acids variation in sourdough formulation and processing 493
Anaerobiosis in ripened tomatoes innoculated with *Fusarium* 379
Antinutritional factor in production of tempe 297
Antiotoxidants found in beverages with spin trapping and EPR: Letter 535
Appearance, irradiation and quality of chilled storage meals 757
Apple juice colour and turbidity improved with ultrafiltration 23
Aquaculture of *Piaractus mesopotamicus* and fatty acid composition 587
Arachis hypogaea L. *see* peanut
Ascorbic acid and properties of globular proteins 321
Aseptic, processing and particle time distribution in tubular flow 625
Ash content of wheat, in formulation of wheat sourdough 493
Aspalathus linearis see rooibos
Aspartic proteinases activity in Baltic cod digestive enzymes 159
Aspergillus spp. heat resistant in fruit juices 587

Bacillus cereus spores' thermal resistance on different media 71
Bacteria, coprecipitation of cholesterol with bile salts 571
and other organisms on beef in SCAP 725
and other organisms predicted in frozen food systems 711
population dynamics on endive leaf age groups 221
Baltic cod digestive enzymes optimum temperature 159
Banana in diffusion coefficients, osmotic concentration model 199
Barley kernals, strength and rheological behaviour 609
Barrier, cells in carrots in convential and ohmic heating 639
properties of edible films 49, 183, 599
Beany flavour, increases with pressure on soy proteins 147
of soy products 263, 297
Beef, in irradiated and chilled stored meals 757
pre-rigor patties and natural additives 65
sous vide packages and stability 365
Beverages, colour method of dye determination with ion-pair 793
emulsified and homogenized peanut extracts 773
with free radical scavenging: Letter 535

© 1995 Blackwell Science Ltd

Bile salts and co-precipitation of cholesterol with bacteria 571
Binding, electrostatic of whey proteins and lysozyme 813
Biocatalyst recycling with immobilized endopectinlyase 391
Biodegradable edible zein films with improved water resistance 599
Biofilm of *Photobacterium leiognathi* as test in process cleaning 523
Blue cod, pathogens, effect of atmosphere and temperature 515
Bologna sausage, freeze-thaw and fat variation alterations 335
Bottling, ripe olives and changes with heat sterilization 31
Bovine blood plasma, foaming properties with ascorbic acid 321
Bovine serum albumin, foaming properties with ascorbic acid 321
Brine-cured pork, manganese ions binding studied with MRI, and erratum 447, 835
Browning, ascorbic acid and globular proteins 321
  in fruit juices 13, 23, 191
  innoculated endive leaves 221
  soymilk after heat treatment: Review 263
Butter solids determination, microwave oven method 307

Calcium, adds firmness to heat sterilized bottled ripe olives 31
  in gellan gum mixtures: Review 693
  and soymilk coagulation after ultrahigh pressure 147
Carbon dioxide atmosphere reduces spoilage 221, 379, 515, 725
Carrot, structures from NMRI using conventional and ohmic heating 639
  tissues macerated with endopectinlyase 391
Catalytic activity of immobilized enzyme 391
Catering requirements in optimum preparation of lentils 215
Cauliflower in irradiated and chilled stored meals 757
Cell barriers in carrots in convential and ohmic heating and NMR 639
Cell viability in freeze-thaw and frozen conditions 711
Cellulosic radical detection in irradiated foods by EPR 675 Letter 681
Cheese, flavour components evaluated by current methods: Review 555
  and other dairy product solids, microwave oven method 307
Chemical shift in meat measurement with MRI and erratum 437, 447, 835
Chewing, in measurements of texture perception: Review 1
  and theories of flavour release from solids 425
Chicken breast meat different colour measurements 663
Chilled storage, of beef in SCAP and bacterial inhibition 725
  of blue cod packages with controlled atmosphere 515
  irradiation and quality of meals 757
Chlorophyl recovery in kiwifruit processing 13
Cholesterol, binding by neonatal *Lactobacillus acidophilus* 571
  extracted by polysorbate 80 from dehydrated egg yoke 57
Cichorium endiva var. *latifolia* c.v. 'Samy' *see* endive, broad-leaved
CIELAB, colour co-ordinates differences with irradiated chicken 663
  measurements of rooibos tea extracts 783
Citrus juice, aseptic, changes during processing and storage 191
  heat resistant fungi 587
Clarification of apple juice with ultrafiltration 23
Clarity of rooibos tea extracts and measurements 783
Cleaning of process equipment tested by *Photobacterium leiognathi* 523

Clostridium botulinum development on stored tomatoes 379
and pasteurization of sous vide beef packages 365
Co-precipitation of cholesterol with deconjugated bile acids by neonatal bacteria 571
Coated and dryed extrudates monitored for water and fat by NMR 655
Coliforms, reduced with HPLT treatment of duck foie gras 734
Colour, determination of single synthetic from ion-pair in soft drinks 793
irradiation, and quality of chill-stored meals 757
measurement instrument differences with irradiated chicken 663
objective measurement of rooibos tea 783
of peanut extract beverages 773
retention of chlorophyl in kiwifruit processing 13
and turbidity in concentrated apple juice and ultrafiltration 23
Combination oven used for potato in models for pasteurization 745
Compression, induced changes in soy milk 147
testing of mixtures of food polymers and gellan gum: Review 693
Compressive strength of barley kernals 609
Computor simulation of microbial population dynamics 711
Conduction of heat analysed in layered structures, lasagna 347
Confectionary products from gellan gum mixtures in various states: Review 693
Contamination kinetics, recycled polyethlyene packaging to oil 807
Controlled atmosphere, of endive leaves and bacteria dynamics 221
and mackerel packages 175
and metabiosis of ripe tomatoes 379
packaging and inhibition of microbial growth 725
and pathogens on blue cod 515
Cooking, does not effect nitrates in dehydrated soups 45
lentils, best conditions for sous vide and catering 215
methods with soy products 147 Review 263
with ohmic and conventional heating assessed with NMR 639
variation for acceptability of lupin seeds in tempe 297
Cornstarch-peanut formulations, moisture and properties of extruded snacks 37
Cotyledon adhesion in pretreatment of pigeonpea processing 485
Cross-contamination inhibited on beef by SCAP 725
Crystallization of lactose in ice-cream, temperature fluctuation 311

Dairy products total solids by microwave oven method 307
Databases of protein sequences: Review 119
Dehydration of osmotically concentrated bananas 199
Development products, with acceptable perceived texture: Review 1
from mixtures of biopolymers and gellan gum: Review 693
Diacetyl tartaric ester of monoglycerides in edible bilayer film 49
Differential scanning calorimetry with freezing of tilapia 167
Diffusion, and acidification model for root vegetables 473
barriers in heating carrot 639
coefficients in osmotic concentration of bananas 199
of heat in potato and confidence interval for pasteurization 745
kinetics of carcinogens from recycled PE film 807
of manganese ions in brine-cured pork and erratum 447, 845
Digestibility, properties and acceptability of tarhana formulations 579

of soymilk after thermal processing: Review 263
Digestive enzymes of the alimentary tract of the Baltic cod 159
Direct measurements for texture perception for product development: Review 1
Distillation-extraction of styrene and GC 397
Distribution of muscle and fat in meat measured with MRI 437
Divalent, counterions in mixtures of gellan gum: Review 693
ion in MRI study in brine-cured pork and erratum 447, 835
DMHF concentrations in aeptic concentrated orange juices 191
Double emulsion formulation and characteristics of low calorie foods 505
Dry matter, solids in dairy products found by microwave oven method 307
Drying, and coating extrudates monitored by NMR for moisture and fat 655
rate influence on emulsified edible films 183
Duck foie gras and high pressure-low temperature pasteurization effect 737
D-values of *Bacillus cereus* spores thermal resistance on different media 71
Dynamic oscillation in biopolymer-gellan gum mixtures: Review 693
Dynamics of flavour release of solids like cheese: Review 555
of flourescent pseudomonads on RTU endive leaves 221
predicted of microbial populations in frozen food systems 711

Eating and swallowing, tongue movements and electropalatography 415
Edible, bilayer films of wheat gluten and lipids 49
emulsified films' barrier properties 183
zein film in biodegradable packaging 599
Egg albumen foaming properties with ascorbic acid 321
Egg dehydrated yolk with reduced cholesterol 57
Egg lysozyme and whey proteins electrostatic interactions 813
Elasticity of barley kernals 609
Electropalatography, texture related behaviour measured in eating 415
Electrical impedence in Ohmic heating in vegetable solids 461
Electromyography for texture perception in product development: Review 1
Electroporation and frequencies in Ohmic heating of Japanese white radish 461
Electrostatic binding of lysozyme and whey proteins 813
Emulsified, coating extrudates monitored by NMR 655
edible barrier films mechanical properties 183
meat and freeze-thaw cycle effects on properties 335
peanut extracts and variable homogenization 773
pressurized soy milk 147
Emulsion rheology of W/O/W and W/O formulations 505
Endives and bacterial dynamics on ready-to-use leaves 221
Endopectinlyase immobilization and recovery 391
Enzyme, activity, immobilized soluble-insoluble endopectinlyase and carrot 391
clarification of apple juice compared to ultrafiltration 23
extracts of Baltic cod alimentary tract, proteolytic activity 159
immobilized soluble-insoluble endopectinlyase and carrot 391
spoilage of ice-stored fish-meat 799
stability in protein engineering for the food industry: Review 119
EPR, detection of cellulosic radicals 675 Letter 681
spectroscopy in quick detection of superoxides: Letter 535
Erratum, on MRI and manganese ions binding in brine-cured pork 835

Evaporation and phase change in finite element analysis, heat conduction 347
Expanded starch from zein for edible biodegradable films 599
Extraction by polysorbate 80 reduces cholesterol in egg yolk 57
Extraction and formation of ion-pair in colour measurement 793
Extracts of peanut emulsified and homogenized for beverages 773
Extrudates monitored by NMR during dying and coating 655
Extruded peanut snack products, physical properties model 37

Fast Protein Liquid Chromatography, lysozyme and whey reactions 813
Fat, carriage and flavour release of solids like cheese: Review 555
  content and styrene migration measurement with GC 397
  levels and properties of emulsified meat, freeze-thaw cycle 335
  and moisture monitored by NMR in drying and coating of extrudates 655
  and muscle meat measurement with MRI 437
  reduction in dried egg yolk 57
  in W/O/W emulsions for reduced calorie foods 505
ω3 fatty acid levels in *Piaractus mesopotamicus* lipids 591
Feed lipids and fatty acid composition of *Piaractus mesopotamicus* 591
Fermentation, and food safety with genetically transformed yeasts 141
  in formulation of wheat sourdough 493
  model of peanut flour based extruded snacks 37
  in tarhana formulations, and protein breakdown 579
Fick's Law applied to osmotic concentration of bananas 199
Films, bacterial surface cleanability tests 523
  edible emulsified barriers and their properties 183
  effect of wheat gluten and lipids compared 49
  kinetics of contamination from recycled polyethylene 807
  PE/PA/PE in reduction of contamination after HPLT 737
  for storage of intermediate-moisture fried mackerel 175
  zein in organic solvent for edible water resistant barrier 599
Finite element analysis during lasagna thermal processing 347
Firmness of moist mackerel in different packaging films 175
Fish, controlled atmosphere packaging and pathogens on blue cod 515
  fatty acids of *Piaractus mesopotamicus* 587
  freezing measurements with tilapia 167
  physical measurement of ice-stored scad and rainbow trout 799
  stability of mackerel in film packages 175
Flavour, lupin seeds in tempe 297
  perception and release with solid foods, evaluation methods: Review 555
  release, and biopolymers mixtures with gellan gum: Review 693
  release, two film theory model and interfacial transport 425
  soymilk changes with heat processing: Review 263
  varies with spices and temperature in sous vide beef packages 365
  volatiles in soy milk and pressurization 147
Flow analysis of residence time distribution of particles in tubes 625
Fluorescent pseudomonads dynamics on endive leaves 221
Foaming and gelling of globular proteins with ascorbic acid 321
Foie gras, duck, in HPLT pasteurization effect 737
Folding of protein soymilk products after heat treatment; Review 263

Folds in protein structures in engineering for the food industry: Review 119
Folic acid reduction with heat action on soymilk: Review 263
Food, perception, texture in product development: Review 1
perception, tongue movements and electropalatography 415
process control monitored by NMR on extrudates 655
Food safety, bacteria dynamics on RTU endive leaves 221
controlled atmosphere storage, temperature and metabiosis, 175, 379, 515, 711, 725
and freezing effects 167, 335, 711, 799
index of methylglyoxal toxicity levels after fermentation with transformed yeast 141
migration of contaminants 397, 807
and nitrate levels in dried soups 45
sporulation media and thermal resistant strains of *Bacillus* spp. 71
see also pasteurization
Food systems optimized using metrics 405
Food-saliva interface changes and flavour release from solids 425
Formulation, model for optimized ham 405
tarhana made from wheat, yoghurt, yeast, and vegetables 579
wheat flour sourdough optimization 493
Free lipids increase with water in sourdough fermentation 493
Free radical scavenging in beverages: Letter 535
Freeze dried egg yolk, reduction by cholesterol polysorbate 80 extraction 57
Freeze-thaw effects on emulsified meat with two fat levels 335
Freezing, curves, from differential scanning calorimetry for tilapia 167
predictive microbial population dynamics in food systems 711
Frequency, electroporation in Ohmic heating of Japanese white radish 461
Fruit juices with heat resistant fungi 587
Fruit preservation, bananas in sucrose solutions 199
Fungi resistant to heat in fruit juices processing 587
Furfural reactions in aseptic concentrated orange juice 191
Fusarium innoculated stored tomatoes and metabiosis 379
Fuzzy logic and models for prediction of spoilage organisms dynamics 711
